

# Release Notes 1.93

Following Features releasing to the production as below.

- **Vendor Self Certification – Tech Go live – Releasing new tech features**
  - **Issue Anywhere badges for completed tests,**
  - **Ability for users to view historical runs**
  - **Ability for users to rerun tests**
  - **Ability for users to download Test report**
- **APIM Admin - Product & API version mapping report.**

**What we did:** Implemented report to give API product and API endpoint version mapping.

**Benefits:** This will give user about the product display name and API version mapping in a single report.

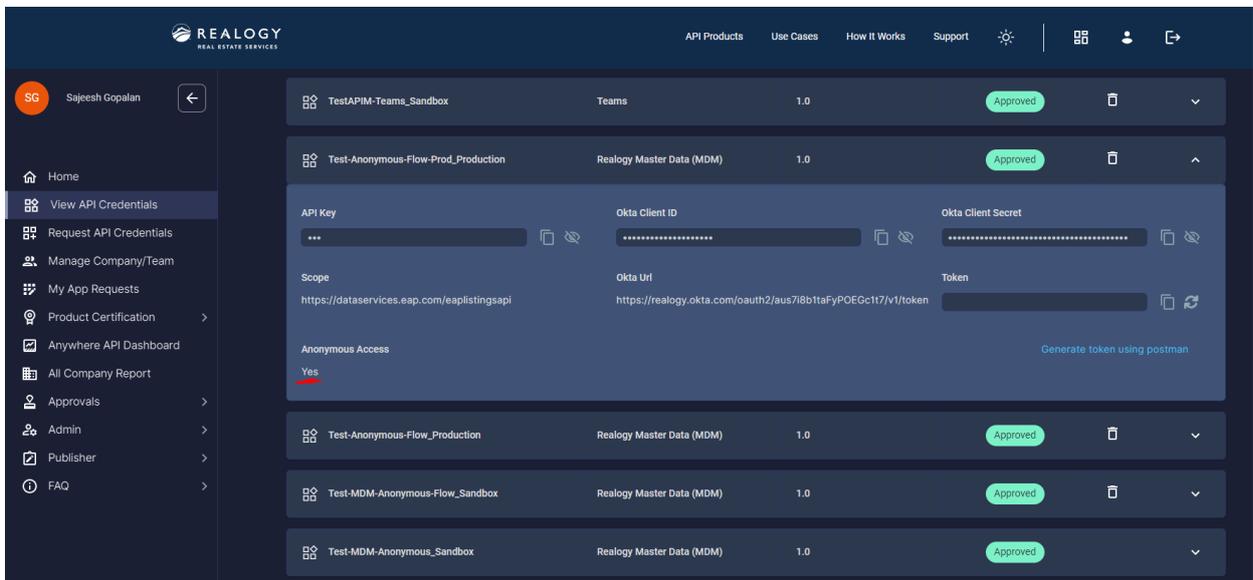

Product Name	Product Display Name	Product Type	Product Version	Version Date	API Name	API Version	API Description
backoffice	Back Office Management	public	1.0	2022-10-27 05:23:47	dash	2020-06-01	Create and get the entities details. Fetch the status of the submitted entities.
realogy-listing-syndication	Listing Syndication	public	1.0	2022-10-19 08:28:51	datasync	1.0	Retrieve company records that were added, updated, upserted or deleted.
realogy-listing-syndication	Listing Syndication	public	1.0	2022-10-19 08:28:51	search	1.0	Search and retrieve office, agent and listing information.
realogy-broker-agent	Marketing - Franchise	public	1.0	2022-10-19	corporatestaff	1.0	Synchronize your local data store with the data

- **Anonymous access key flag added to the My Apps and Apps report pages**

**What we did:** Implemented feature to indicate the App requested is for anonymous access or not.

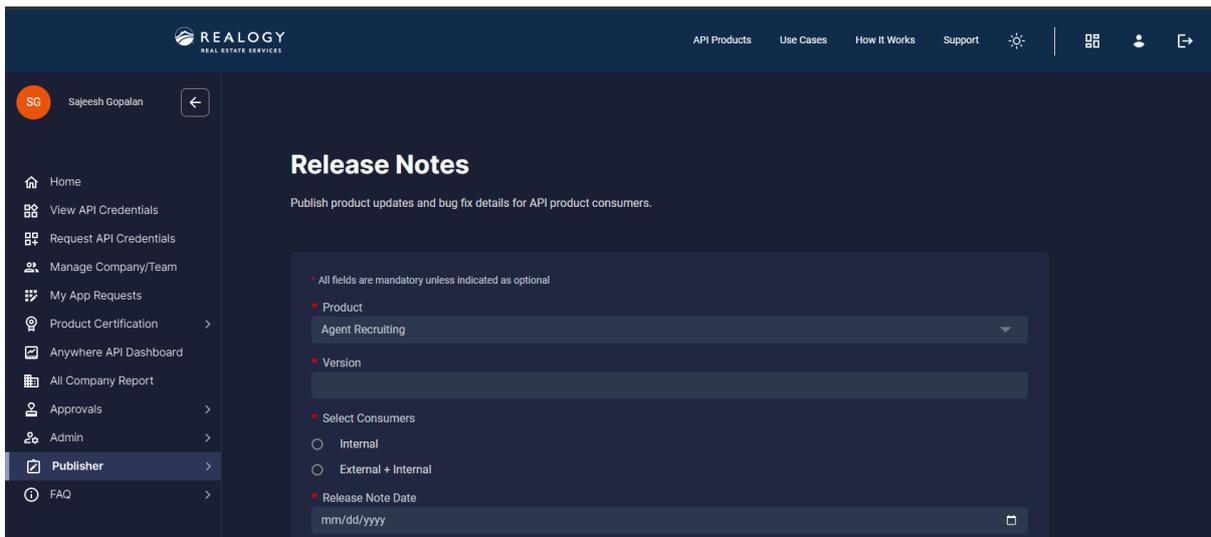

**Benefits:** This will give more information to user that the app requested is for anonymous access or not.

- **Release Note Modification**

**What we did:** Rearranged the release note fields “Version” after the “Product” field.

**Benefits:** This will give user to enter correct product version in the release note form.

- **Technical release tickets**

- ✓ Signup must be restricted for all Internal domains.
- ✓ Company Apps report - App status is showing pending even after it is approved.
- ✓ Convert to allowed version to APIGEE with JSON string.

## Devops features

- **Skip API version check for Options call for browser generated API calls**

**What we did:** Added a condition check to allow options calls without versioning check

**Benefits:** All the browser-based applications make Options call to check if CORS is allowed. For this call we will skip checking API version to allow consumers to make calls from browser without any issues.
